Xcelerate™: Business Central Distribution Enhanced Add-On

MASTER COMPLEX DISTRIBUTION CHALLENGES:

THE ULTIMATE TOOL FOR ADVANCED INVENTORY AND WAREHOUSE MANAGEMENT

⏱ **5 weeks**   💲 **$36,000**

The Distribution Enhanced package offers extensive distribution management capabilities for small to medium-sized businesses. This comprehensive solution includes all the benefits of the Distribution Essentials package and introduces additional functionality with features like advanced warehouse management and detailed item tracking. Ideal for businesses with complex distribution needs that require sophisticated tools for inventory, warehouse, sales, and purchasing operations.

WHAT YOU GAIN

Sophisticated Inventory Management: Utilize advanced item tracking capabilities, including serial and lot number tracking, to maintain impeccable inventory records.

Comprehensive Sales Tools: Leverage enhanced sales order processing, including prepayments, blanket orders, and detailed pricing and discounting strategies, to maximize revenue.

Dynamic Purchasing Operations: Benefit from a comprehensive set of tools, including purchase prepayments and requisition worksheets, to streamline purchasing processes.

Streamlined Warehouse Efficiency: Advanced warehouse management, including detailed bin and item tracking, ensures that every item is accounted for and efficiently managed.

Smart Assembly and Kitting: Efficiently plan and execute assembly operations with detailed bills of materials and kitting strategies that save time and reduce costs.

WHAT IS ENAVATE XCELERATE™

The Xcelerate™ Rapid Deployment methodology streamlines ERP implementations across all modules with standardized processes that reduce complexity and accelerate go-live times.

This approach utilizes predefined templates and configurations for quick, consistent setups at a fixed price, making it ideal for businesses seeking efficient and reliable technology enhancements.

BUSINESS CENTRAL ENHANCED ADD-ON

YOU WILL BE ABLE TO:

5 weeks $36,000

Register New Items	Establish detailed records for each traded inventory item, capturing essential attributes and financial details for effective inventory management
Categorize Items	Maintain an item overview and facilitate item search and sorting by categorizing them.
Item Variants	Manage different variations of a product, like size, color, or other attributes, while keeping a consolidated view of inventory.
Cross-Reference	Manage and identify inventory items using alternative item numbers, barcodes, or supplier item numbers.
Serial/Lot Number Tracking For Inventory	Assign unique serial or lot numbers to items for better traceability and recall management.
Cycle Counting	Periodically verify the inventory quantities in the system against actual physical counts.
Landed Cost/Item Charges	Factor in additional costs like shipping, import fees, etc., into the item cost.
Planning Worksheet	Automate inventory replenishment suggestions based on demand and supply forecasts.
Stockkeeping Units	Manage inventory attributes at a more granular level considering combinations of items, variants, and locations.
Item Substitutes	Allow the setup and identification of alternative items that can replace a primary item, either due to stock-out situations or other strategic considerations.
Inventory Adjustment	Rectify and align system inventory data with actual stock counts and costs.
Assembly Management	Combine several items into a single new item, based on a bill of materials (BOM). This can either be for the purpose of selling the assembled item or for kitting multiple items together in a package for sale.
Sales Line Pricing And Discounts	Set and adjust individual item prices and discounts within sales orders, accommodating various pricing strategies such as volume discounts or promotional offers.
Sales Price	Run-timed promotions offering special prices for certain items to select customers.
Customer Price Groups & Customer Specific Discounts	Assign customers to specific price groups and define pricing for each group. Apply unique discount rates or amounts for particular customers or customer categories.
Sales Invoice Discounts	Apply and manage discounts on entire sales invoices based on predefined conditions or special agreements.
Alternative Ship-to Addresses	Allow storage of multiple delivery locations for each customer, facilitating diversified shipping options based on order specifics or customer preferences.
Sales Quote	Provide potential customers with a formal offer for products or services at defined prices, with the capability to convert these quotes into actual sales orders once accepted.
Sales Order	Record a sales invoice to document agreed product sales on specific delivery and payment terms.
Sales Prepayments	Collect advance payments from customers before delivering goods or services.
Blanket Orders	Create a master order with agreed-upon terms, from which multiple sales orders can be generated as needed.
Special Orders	Handle orders for items that are not regularly stocked and are ordered specifically for a particular sales order.
Drop-Shipments	Facilitate sales where the distributor receives an order from a customer and places a purchase order with a vendor, who then ships the product directly to the customer. The distributor manages the sales order, invoicing, and customer relationship without handling the physical product.
Sales Returns	Generate a sales credit memo to reverse specific posted sales invoices, indicating returned products and the refundable payment amount.
Purchase Quote	Generate and manage quotations for potential purchase orders, detailing products, quantities, and prices.
Purchase Line Pricing And Discounts	Set and adjust individual item prices and discounts within purchase orders based on agreements with vendors.

BUSINESS CENTRAL ENHANCED ADD-ON

YOU WILL BE ABLE TO: (cont.)

5 weeks   **$36,000**

Alternative Vendor	Link multiple potential vendors to a single inventory item, ensuring flexibility and options in procurement.
Purchase Invoice Discounts	Apply and manage discounts on entire purchase invoices based on predefined conditions or vendor agreements.
Purchase Prepayments	Make advanced payments to vendors before receiving the goods or services. This is useful for securing inventory or services in advance.
Requisition Worksheet	Automate and optimize the purchase order process based on inventory levels, demand, and other criteria. This helps in efficient inventory management and timely replenishment.
Blanket Orders	Establish long-term agreements with vendors for the supply of goods or services over a defined period at agreed prices. This helps in securing better pricing and ensuring supply consistency.
Purchase Order Returns	Manage and document return of items to vendors due to discrepancies, damages, or other reasons.
Warehouse Receipt	Manage and record the receipt of goods in the warehouse.
Warehouse Shipment	Manage and record the shipment of goods from the warehouse.
Warehouse Movement	Optimize space and improve efficiency by moving inventory within the warehouse.
Warehouse Internal Pick and Put-away	Manage internal warehouse operations for picking and putting away items.
Bin Set-up	Configure and manage bin locations within the warehouse.
Warehouse Employee Management	Assign and manage tasks and responsibilities of warehouse employees.
Multiple Locations	Maintain and manage various storage locations to support operations across different geographical areas or warehouses.
Inventory Transfers	Moving inventory items between different locations or warehouses to ensure optimal stock distribution and availability.
Bin Level Item Tracking	Tracking of items at specific bin locations within a warehouse or storage facility.
Advanced Item Tracking	Track inventory with precision across the entire supply chain, including within the warehouse, by using serial numbers, lot numbers, and other advanced tracking features. This ensures complete visibility of inventory movement and status, which is vital for businesses dealing with perishable goods, items with expiration dates, or those that require strict quality control.

REQUIRED FOUNDATION

All Xcelerate ™ add-ons, including the Xcelerate ™: SPI Add-On, Xcelerate™: Distribution Essentials, and Xcelerate™: Distribution Enhanced, require an underlying Xcelerate™: Business Central Finance package to function.

Ensure your foundation is set with our robust finance solutions to unlock the full potential of these powerful add-ons.
